

# Code 4 Community

*An Ohio State Student Organization*

## Mission

At Code 4 Community, our mission is to help our community through computer science. This can include teaching computer science to grade school students, working with researchers to develop

applications to help those with mental illness, and much more!

## Education Outreach

Our outreach workshops are designed to teach students aged 10+ the basics of code, hopefully inspiring them to pursue computer science or STEM in the future. We typically accomplish

this in a 60 - 90 min demonstration of one of our custom modules. Throughout the semester our volunteers work on gamified coding modules, then at our workshops we give a quick tutorial and let the kids dive into the modules. Past modules include modified versions of the popular web-game “Tanks” and “World’s Hardest Game”.
